

Elderberry

Variety: Haschberg
Species: Elderberry, *Sambucus nigra*

Origin:	
Breeder, Place	clone selection from Klosterneuburg, Austria
Parents	naturally grown in the Danube region
Blossom:	
Blooming date	end of May/beginning of June
Fertility	self-fertile
Fruit:	
Ripening time	from end of August until early September, irregular ripening in the case of vigorous growth, for fruit bunches which ripen unevenly 2-3 picks are necessary
Scale	medium large, obloid to globose
Colour	shiny black red, high to very high dye content
Utilisation	flower heads for blossom essence, fruits for juice making and dye extraction
Tree:	
Vigour	medium strong, vigorous annual shoots
Crop load	high and regular
Evaluation:	Haschberg is a medium strong growing variety with large fruit bunches, reliable productivity and versatile use. This variety needs to be monitored for uniformity and reselected accordingly.
