

Peach

Variety: **Peche de Vigne**

Species: Peach, *Prunus persica*

| | |
|---------------------------|---|
| Origin: | |
| Breeder, Place | old french variety from the area of Lyon |
| Synonym | Sanguine D |
| Property rights | free variety |
| Blossom: | |
| Blooming date, -intensity | medium-early blossom period, high density |
| Fertility | self-fertile |
| Flower shape | rose shaped, big and double flowers |
| Frost susceptibility | low to medium |
| Fruit: | |
| Ripening time | medium late, 11. peach week |
| Scale, shape | medium large, rounded |
| Skin | moderate woolly skin |
| Colour | 100 % purple over colour |
| Fruit flesh | red flesh, firm, juicy |
| Taste | sourish, slightly bitter with reminiscences of wine |
| Stone separability | freestone |
| Storage | good |
| Tree: | |
| Vigour | medium strong, semi-upright |
| Crop load | high to very high, because of the typical preharvest fruit drop the fruits should be picked already underripe |
| Evaluation: | Robust, late ripening variety with red flesh. The large double flowers have a high ornamental value and therefore favoured by florists for decorative purposes. Used as dessert fruit and also for processing e.g. compotes, cake topping and distilling. |
