

Peach

Variety: Roter Weinbergspfirsich 'Mosel'

Species: Peach, *Prunus persica*

Origin:	
Breeder, Place	unknown, already cultivated before 1900
Type, Selection	heterogeneous planting material, different in size, colour of the fruit flesh and ripening time
Property rights	free variety
Blossom:	
Blooming date, -intensity	medium early blossom period, high density
Fertility	self-fertile
Flower shape	rose shape
Frost susceptibility	low susceptibility of flower buds to winter frost
Fruit:	
Ripening time	very late, 14. peach week
Scale, shape	small to medium large, rounded
Skin	very woolly skin
Colour	100 % crimson over colour
Fruit flesh	red flesh, fibrous, medium juiciness
Taste	sourish-aromatic, slightly bitter
Stone separability	freestone
Storage	good, when harvested overripe the fruits have a tendency to be dry and mealy
Tree:	
Vigour	weak to medium strong, weaker side wood, only medium proneness to peach leaf curl
Crop load	medium to high, because of the typical preharvest fruit drop the fruits should be picked underripe
Evaluation:	Very late ripening, robust variety, which has been further selected over time. Less suitable for dessert fruits, but very suitable for processing, distilling and for producing fine liqueurs and jam.
