

Mirabelle-Plum

Variety:**Bellamira (S)**

Species:

Mirabelle-Plum, *Prunus domestica*

| | |
|-----------------------|---|
| Origin: | |
| Breeder, Place | Prof. Dr. Helmut Jacob, Research institute Geisenheim, Germany |
| Intellectual property | Artevos, Germany |
| Parents | Cacaks Beste x Nancymirabelle, 1994 |
| Crossing number | P 34-56 |
| Property rights | registered for EU plant variety rights |
| Blossom: | |
| Blooming date | medium late to late |
| Fertility | self-fertile |
| Fruit: | |
| Ripening time | medium, 6. plum week, 3-5 days before 'Nancymirabelle' |
| Scale, shape | large, Ø 30 mm, 20 g, globose |
| Colour | yellow green to yellow, strong bloom, on sunny side light red cheek |
| Fruit flesh | yellowish, medium firm, very juicy |
| Taste | Aromatic-sweetish with gage aromatics |
| Cracking sensitivity | low, less susceptible to Monilia |
| Stone separability | good |
| Plum pox | tolerant |
| Tree: | |
| Vigour | medium to strong growing, semi-upright, at mature stage spreading, good branching |
| Crop load | from an early age, high and regular, low tendency to biennial bearing |
| Evaluation: | This attractive, large mirabelle plum expands the picking season of the classic 'Nancymirabelle' season. It is well suited for dessert fruit and processing. The long harvest window is also remarkable. |
