

Sour cherry rootstock

Own root 'Schattenmorelle'

Trees with small crown for hand picking

Vigour: In comparison to trees grafted on *Prunus avium* the own root 'Schattenmorelle' grows 40 - 50%.

Characteristics: Most sour cherry varieties grow very strongly and are only moderately fertile when standing on their own root. The variety 'Schattenmorelle' shows a significant decrease of the growth rate instead. The trees are compact and very fertile and well suited for hand picking.

Spacing: 1,5 - 2 m x 3 - 4 m

Site: Also suitable for dry and more light soils. Good frost hardiness.
