Cracking sensitivity	low to medium, tends to crack at the pistil point
Tree:	
Vigour	medium strong, semi-upright, slightly compact, very good branching, without blind wood
Crop load	medium to ideal

Sweet cherry

Evaluation:	<p>Very attractive fruits that ripen shortly after 'Burlat' and impress with their fruit size.</p> <p>A final evaluation of this variety and its susceptibility to bacterial canker is not possible yet because of the short testing period. Right now it is only recommended for best sites.</p> <p>If you are interested to plant CERASINA™-varieties outside of the Netherlands or Germany we need the authorisation of the license holder.</p>
