

Sweet cherry rootstock

WEIGI™ 2

Suitable for hot and dry sites

Vigour: 45 - 60% compared to *Prunus avium*

Origin: Crossing with Gießener Selektion and Weiroot

Characteristics: Medium strong rootstock with uniform growth and good lodging resistance. Early and regular yields with good to very good fruit size. Varieties with medium productivity can benefit of the positive effect this rootstock has on yield performance.

Spacing: 1,5 - 2,5 m x 3,5 – 4,5 m

Site: Because WEIGI™ 2 is characterised by its deep rooting, this rootstock is suitable for hot and very dry sites. According to previous experiences a high adaptability to various climate conditions showed. Suitability for replanting is still in examination.
