

Plum

Variety: Cacaks Fruchtbare

Species: Plum, *Prunus domestica*

Origin:	
Breeder, Place	Institut Cacak, Serbia
Parents	Stanley x Pozegaca (Hauszwetschge), 1961
Synonym	Cacanska rodna
Property rights	free variety
Blossom:	
Blooming date	medium
Fertility	self-fertile
Fruit:	
Ripening time	medium late, 8. plum week
Scale, shape	medium, >35 mm, 30-45 g, ellipsoid
Colour	purple blue with dark blue bloom
Fruit flesh	greenish yellow, firm, juicy
Taste	aromatic and sweet at ideal crop load, too high crop load leads to poor flavour
Cracking sensitivity	low
Stone separability	freestone
Plum pox	high to very high susceptibility, if there is a high infestation the tree ages fast, early fruit fall and fruit deformation is possible
Storage	possible for 2 weeks, very easy transport
Tree:	
Vigour	medium strong, at mature stage harmonious growth, good branching
Crop load	high yielding variety, a weak growing rootstock is only suitable for best soils
Evaluation:	Cacaks Fruchtbare is well known for its good baking characteristics and therefore is widely planted in orchards. This high yielding variety allows for high picking rates, but a thorough fruit-thinning is necessary to prevent biennial bearing. Important to mention is the high susceptibility to Plum Plox Virus of this variety.
