

Plum

Variety: Tegera (S)
Species: Plum, *Prunus domestica*

Origin:	
Breeder, Place	Dr. W. Hartmann, University Hohenheim, Germany
Intellectual property	Artevos, Germany
Parents	'Ortenauer' x 'Ruth Gerstetter'
Property rights	registered for EU plant variety rights
Blossom:	
Blooming date	early to medium early
Fertility	self-fertile
Fruit:	
Ripening time	medium early, 5. plum week
Scale, shape	medium large
Colour	purple to dark blue, pretty bloom
Fruit flesh	firm and juicy
Taste	spicy-aromatic
Stone separability	freestone
Plum pox	sensitive
Storage	good
Tree:	
Vigour	medium strong, upright
Crop load	medium to high, early and regular
Evaluation:	An early ripening variety that yields regular and high and also maintains good fruit size. The aromatic fruits are suitable for fresh eating and processing. Because of its high susceptibility to Plum Pox Virus this variety should only be planted in sites without PPV occurrence.
